# QUEEN OF BEAUTY

To Appear in Washington in Regal Splendor. . . .

## A Grand Society Event. Mme. Yale to Lecture

At the National Theater on Beauty and Physical Culture

(THE YALE SYSTEM). Subject: "The Art of Attractiveness."

The ladies of Washington are to be scientifically entertained at the National Theater by the world's greatest living scientist on Beauty Culture and Exponent of "Beauty." Mme. Yale, of international fame, is to give one of her classical lectures and high-class entertainments there on Tuesday, May 14, at 2:30 o'clock p.m. "Attractiveness," Mme. Yale's subject on this occasion, will give her broad scope for artistic rendition.

### Personal Mention.

Mme. Yale, who was originally a portrait and figure painter (while abroad pursuing her art studies), conceived the idea that it was the Creator's Intention that all humanity should be and that each generation should evolve into greater beauty, set herself the life task of fransforming human ugliness into beauty and bringing about this great reform. Her first experiment, which was upon herself, wrought such marvelous results as to create a profound sensation in scientific circles throughout the civilized world, and to completely revolutionize human evolution. Mme. Yale, who has been steadily improving herself under her own system for the past twenty years, as a test of her own methods and discoveries, is conceded to be the most marvelously beautiful woman of the age. Absolute harmony in coloring, contours and expression perfect the ensemble. She has evolved herself into a human gem of flawless beauty. The most mystifying part of Mme. Yale's conquest consists in the fact that she is now fifty years old and retains all the freshness of childhood and the vigor of early youth. Rounding contours, delicacy and exquisite beauty of complexion, softness of expression, brilliancy of glance, merriment of smile, the music of the voice, suppleness of body, grace of movement, and a thousand and more other charms too infinitely divine for words to portray, making her appear as though she belonged to the Immortals. Thousands of women everywhere have been following Mme. Yale's example with the same gratifying results. Mme. Yale will devote the balance of her life in establishing her system all over the world, and in placing her discoveries in the broad channels of trade, so that all humanity may profit by them. Mme. Yale will tell the ladies all about her system and teach them her secret science of Beauty Culture,

### Physical Culture.

Mme. Yale's system of physical culture creates health and beauty; it lends strength and dignity to the carriage; it gives suppleness to the body, elasticity to the muscles, limberness to the joints, and the poetry of motion to gesture of movement and grace to the expression of the body. Mme. Yale's own figure is an exact counterpart of the "Venus de Milo." She will devote one act te physical culture by demonstrating the various movements of her famous system for creating physical splender. In this act Mme. Yale will appear in a gauzy "Greek" costume, so as to display her perfect ferm and to show the position of the body while in motion of taking the beautify-

### Beauty Culture.

Mme. Yale will give instructions for ridding the skin of all blemishes and for creating a perfect complexion. The hands, arms, neck and bust will likewise receive artistic consideration.

Mme. Yale is the only authority in the world who has conquered wrinkles. She will instruct the ladies how to banish them and how to keep them at bay forever. Softness of expression and a

### The Eyes, Mouth and Expression.

Mane. Yale will lay great stress on the treatment for beautifying the eyes, mouth and expres-

Mme. Yale is the only scientist who understands the scientific workings of the human hair. Its natural restoration to color is among her noted achievements. Mme. Yale will talk at length on the scientific treatment of the hair for making it luxuriant, youthful and rich in color. She will also discuss its artistic arrangement and becoming styles. The brows and lashes will also

## Superfluous Hair.

Mme. Yale will tell how to overcome the abnormal state of superfluous hair so as to refine it

## Tickets Complimentary.

Tickets for Mme. Yale's lecture, good for a reserved seat, will be given conditionally free. In order to control them and to distribute them without showing any partiality in regard to choice of seats, all who apply for a ticket will be requested to make a purchase of one or more of Mme. Yale's One ticket will be given with a single purchase amounting to 79c. or over. The best seats will be given the first purchasers until they are all given out. TICKETS ARE ready and should be secured now, or as far ahead in advance of the lecture as possible. Thousands are always turned away from Mme. Yale's lectures, owing to over crowded houses. Tickets can be had only at the Yale Department, adjoining the Toilet Goods Department of S. Kann, Sons & Co., Eighth and Select articles for parchase from the list below.

Mme. Yale's Washington agents, the enterprising firm of S. Kann, Sons & Co., have secured the agency for Mme, Yale's discoveries for Washington. A complete line of Mme, Yale's Scientific Health Remedies and "Beauty Culture" specialties may be found there at all times. Tickets for Mme. Yale's lecture can be had of them ONLY ..

## Mme. Yale's Beauty Books.

All visitors to the Yale Beauty Department this week will receive two books written by Mme. Yale on the immortal theme of Beauty. The Yale system complete will be found in Mme. Yale's book, "Weman's Wisdom." Ask for it. "Hair Beauty" is a complete treatise on the human bair.

### BOOMING BUSINESS

Mass Meeting Held to Discuss Benefits of Manufactories.

IN THE INTEREST OF THE DISTRICT

Addresses by Messrs. O. F. Crosby, S. W. Woodward and Others.

RESOLUTION ADOPTED

A mass meeting, the purpose of which was to stimulate industrial growth and encourage manufacturers in the District of Columbia, which was called by the Business Men's Association and held under its auspices jointly with the Washington Board of Trade, took place at Masonic Hall last night. The attendance, though not large, was representative. The speakers were at all times earnest and frequently enthusiastic in their advocacy of the development of existing industrial enterprises and the establishment of plants for the production of the goods of trade. The sentiment of the speakers. A sympathetic interest in all that was said was manifested by applause that was sincere and spontaneous. There was not a discordant note in the

Those who spoke dwelt upon the natural though neglected advantages of Washington and adjacent country. Attention was directed to the vast water power of the Potomac; to the transportation facilities offered by Washington, both by rail and river; to the proximity of the national capital to the sea and the contiguity of great coal fields. The salubrity of the climate was eulogized and the effectiveness of the form of government was solved out. Part form of government was pointed out. Parallels were drawn between industrial conditions prevailing in London, Paris, Berlin, Vienna, St. Petersburg, Rome, Madrid, Buenos Ayres, Rio de Janeiro and Wash-ington, and it was asserted and not disputed that Washington, in comparison with the other capitals named, is inactive in a commercial sense. One speaker said Wash-ington has faded into a city of executive and legislative ambition. Another said the objection urged by the leisure class to factories is not entitled to the consideration of the permanent residents of the city. One said no inspiration is provided and no hope held out to the new generation of

Washingtonians.
At the close of the meeting a resolution was offered and adopted without dissent, setting forth: "That it is the sense of this meeting that the location of manufacturing plants in the District of Columbia be heartily encouraged, and that anything tending to induce manufacturers to locate their plants here receive the carnest suptheir plants here receive the earnest support and approval of our citizens."

Those who addressed the meeting were O. T. Crosby, L. L. Powell, S. W. Woodward, Frank Hume, A. P. Fardon, B. H. Warner, V. Baldwin Johnson and Frank B. Metzerott.

Objects Explained. The meeting was called to order at 8:20 by Thomas W. Smith, who explained the purpose for which the meeting had been called. The time was ripe, he said, for the vigorous and practical discussion of a question which affected the material welfare of the city. He quoted at some length from the bulletin of manufactures in the Dis-trict, recently issued by the census office, saying that Washington manufactured within its limits all manner of things for the use of its own people, the aggregate value of articles produced in the District last year being \$47,000,000. Twice as many persons, he said, are engaged in private industrial effort in this city as are employed in the government departments, bureaus and other federal works. Mr. Smith urged that encouragement he extended to those the use of its own people, the aggregate value of articles produced in the District last year being \$47,000,000. Twice as many that encouragement be extended to those manufactures already established, and that an invitation be given manufacturers to install plants here. The development of the city meant much to the present inhabitants and to their children. He spoke of the energy displayed by associations of business men and others in various American cities in presenting attractions to manufacturers. Washington has railroad facilities, the river and a canal for the bringing in of raw materials, and the taking out of manufactured goods. The city is well located, he said, and the facilities it offers should

be embraced. Mr. Crosby's Address.

The first speaker was O. T. Crosby, By way of introduction he said the population of Washington is composed of eight classes, which he enumerated and described

Those directly employed by the United States government.
"Second. Those representing the interests of the citizens of the United States with the government, as, for example, patent attorneys and newspaper corre-

spondents.
"Third. Foreign representatives resident with our government.

"Fourth. Promoters of enterprises at-tracted here by the existence of the government institutions, but not directly con-nected therewith, as, for example, schools having other than local pupils and a few small manufacturing enterprises shipping goods outside of the District of Columbia.
"Fifth. Persons of independent means, living here chiefly in leisure.

"Sixth. Persons engaged in supplying the wants of the other classes just named, the wants of the other classes just named, this sixth class embracing substantially all of the local commercial business, building trades, transportation work and banking and professional and District gov-

ernment employes.
"Seventh. A due proportion of domestics engaged in personal service with those of the seven preceding classes able thus to

employ domestic help, "Eighth. Not strictly classed as residents, but constituting a considerable ele-ment in the total activity of the city, must be placed the very large number of transients, whose wants must be supplied by the sixth and seventh classes just named. Those who are here only as passing trav-elers, of course, do not enter into our enumeration as residents, hence of the first-named seven classes we may now say that altogether something like 300,000 persons reside within the District of Columbia, and constitute, I think, the most unique body of that size which may be found upon the face of the earth. They are

unique politically, socially and industrial-Ratio of General Growth. Mr. Crosby gave as his opinion that the

future will add to the numbers of each class and that the aggregate increase might be confidently taken as at least in the ratio of the general growth of the "The thousands of children," said Mr.

Crosby, "who are prepared in the excel-lent schools of the District for the bat-tles of life and for its opportunities must turn elsewhere than to the vocations which their fathers follow and which have drawn here an unusually diverse and an unusualy intelligent population. The whole question as to an attractive future for a large fraction of the young men of this city narrows down to a consideration of that problem which has brought us together to-

Mme. Yale's Complexion Bleach cures the skin of "There must be industrial establishments, manufacturing or commercial, or the young man must go away from Washington. Our problem is serious as compared to that presented elsewhere by reason of the excessive proportion of our young men who must seek activity away from their homes. I mean young men of promise, able to fill the higher positions in life. In another and less capable grade of society, the ordinary laboring classes, this need is always felt and is certainly best cured for normal and permanent security of so-ciety by industrial activities open to that

"The ultimate effects socially of an in crease on our industrial side would, I am convinced, be altogether desirable. It would certainly be more normal. Who are in this country the leaders and who are the rank and file of the American people? The leaders are the leaders of industrial enterprises and the rank and file are those who are employed in industrial enterprises. who are employed in industrial enter-

prises.

The speaker proceeded to discuss the traness houses generally, that they mar the beauty of the city and that coal smoke is a nulsance. He said: "A row of handsome wholesale houses

# M. Dyrenforth & Co., 923 Pa. Ave.

would not materially injure the south side chimneys. We are not the only city in the of Pennsylvania avenue. It is the custom today to make business houses attractive externally, and the replacement of some of our earlier structures, when the standard was not so high, by modern buildings, if was not so high, by modern buildings, if we had such commercial activity as some of us here would like to see, would be a distinct benefit. As to factories, thinking first of the buildings themselves, they are often today designed to please the eye, and it may come it is quite timesestible for and in any case it is quite impossible, for economical reasons, that they should place themselves within those sections of the city where, by private and by public effort, the external beauty is held up to a

high standard.
"We are really brought to consider but one alleged disadvantage, as against all those advantages of vital character which have been discussed. That disadvantage seems to be solely the smoke nulsance. Concerning this, let it be said that the amount of power required for many forms of manufacture, such as are in other respects best adopted to our community, require very little in the way of power; that many of those now in existence here on a small scale are supplied by electrical power small scale are suppned by electrical pro-from one steam station, and that this pro-from one steam station, and that this process may be very largely extended. Very much progress has been made and is daily being made in the control of smoke out of

TO CURE A COLD IN ONE DAY

country containing people of some esthetic taste. The problem is being attacked elsewhere as well as here, and considerable nuisance is given to manufacturers for a time, and some patience should be shown people who engage in helpful enterprises, although it be thoroughly understood that they engage in them solely for their own "Even if we desire to be a Pittsburg we

may never hope to be Pittsburg. If we desire to be New York, which by the way, is not badly cursed by the smoke nuisance, although a great manufacturing city, we could not be New York. The western cities which suffer most from smoke are those which burn a character of coal far worse in this respect than the class used in this region. Baltimore, our next-door neighbor, does a very large commercial and manufacturing business, and is not particularly burdened in respect to smoke. Therefore, looking at it solely from the point of view looking at it solely from the point of view of manufacturing by steam, the matter seems to be one wholly insignificant, one recognizing the control, physical and legal, which can be exercised in this matter to stand against the great advantages, almost necessities, for the future. most necessities, for the future.
"We have quite as many advantages for

manufacture as are to be found in most places where general manufacture takes place, excluding such places as Pittsburg, which attract to us special manufacturing,

We have more facilities in the way of railways and water and pleasant home sur-roundings than very many of the cities which many of you are familiar with.

Frank B. Metzerott interrupted to call atention to what he termed burdensome regment, and which operate as a check to industrial enterprise. He said sometime ago a man wanted to start a chair factory near the jail, but certain lot owners protested for the reason that the factory would depreciate the value of their property, and the District Commissioners revoked the building permit.

Mr. Metzerott referred to the proposition advanced by the late F. K. Ward to erect a creamery on Indiana avenue, and said that after the foundation had been dug the opposition of property holders brought about a revocation of the permit.

Mr. Crosby said he was not aware that restrictions upon certain classes of industrial enterprises are greater in Washington than in other cities. He believes they

L. L. Powell pointed out the obstructions which, he said, had to be overcome before a butterine factory could be erected, and referred to the backwardness of Wash-

UNDERTAKERS. W. R. Speare,

Undertaker & Embalmer, 940 F STREET NORTHWEST. Everything strictly first-class and on the most

with the capitals of other great nations. He advised "self-opiniated local dealers to put aside petty jealousies and encourage industry." Factories would increase the population of the city, and the value of its real estate. He said Washington has

nearly as great water power as Minneapolis

reasonable terms. Telephone call 340. ja7-10tf
